

# Abstract Unit 5 - 5th Grade

## Shapes and Their Origin

A shape is the external appearance of an object. We can classify shapes based on where we find them: natural or artificial forms.

Organic shape

Geometric shape

## Rhythmic Art

When artists and designers repeat shapes, they create patterns. They repeat various elements in different sizes and colors to form the main pattern. This repetition gives a sense of visual rhythm to their designs.

## Representing Shapes

Artists use different resources to represent shapes. These include outlines, silhouettes, and inner contours.

Outline

Silhouette

Inner contour

Outline it limits a shape. Silhouette it represents a shape using one colour patch. Inner Contour these are the lines colours and textures used inside a shape.

## The Relationship Between Shapes and Space

To help us see the distance and depth between shapes, artists use different techniques: overlap, use of cool and warm colors, and sizes of larger and smaller objects. Space is where the shape transforms into a figure.

## Public Information Campaign Posters

These use a variety of elements to capture our attention:

- A slogan: a simple phrase that makes us think, accompanied by an image to illustrate it.
- Brief text: to explain the message of the poster.
- A logo: to identify the represented organization.
