

BIOGRAPHY OF RICHARD SERRA

Richard Serra was born on November 2, 1938, in San Francisco, California. He is an American artist known for his large-scale sculptures made of steel. His works are often found in public spaces and museums around the world.

As a child, Richard loved to draw and paint. He studied English literature at the University of California, Berkeley, and later went to Yale University to study art. At Yale, he met many famous artists and decided to become a sculptor.

In the 1960s, Richard Serra began making sculptures using heavy materials like lead and steel. He wanted his art to be very strong and powerful. One of his most famous works is called "Tilted Arc," which was a large steel wall placed in a plaza in New York City.

Richard Serra's sculptures are known for their size and weight. They often change the way people experience the space around them. Some of his sculptures are so big that people can walk around and through them.

Throughout his career, Richard Serra has received many awards and honors. He continues to create art and inspire people all over the world. His work shows how art can transform the spaces we live in and make us see the world in a new way.
